PROFESSIONAL SUMMARY

Data Analytics & Engineer cleaning raw data, building secure pipelines, and designing interactive business dashboards. Passionate about transforming complex datasets into clear, reliable insights that help organizations make smarter decisions. Focused on creating scalable, high-performing solutions for business growth.

EDUCATION

The American College, Madurai

Jul 2023 – Apr 2026

Bachelor of Science in Information Technology

CGPA: 7.0/10

SKILLS AND PROFICIENCIES

Languages	: Python, SQL
Data Analysis Libraries	: Pandas, NumPy, Excel (Advanced – Pivot Tables, VLOOKUP/XLOOKUP, Power Query)
Data Visualization & BI	: Power BI, DAX
Databases	: PostgreSQL, MySQL
ETL & Data Engineering	: ETL Pipelines, Data Cleaning, Data Modeling, Data Warehousing
Cloud Platforms	: Microsoft Azure, Azure Data Factory (ADF), Azure Databricks, Microsoft Fabric
Version Control	: GitHub, Git
CS Fundamentals	: OS, CN, DBMS, OOPs
Interests	: Data Engineering, Cloud Computing (Azure)

PROJECTS

Sales Data Warehouse & ETL Pipeline | PostgreSQL, SQL, ETL, Data Modeling, Power BI

2026

- Designed and implemented a scalable ETL data pipeline using Medallion Architecture (Bronze → Silver → Gold) on PostgreSQL, ingesting raw ERP and CRM data and transforming it into a normalized, dimensionally modeled star schema for enterprise reporting.
- Applied data quality and standardization rules during transformation, reducing data inconsistency across source systems and enabling reliable downstream analytics.
- Developed SQL based EDA (trend, cumulative, and segmentation analysis) and built a Power BI dashboard.

Sales & Operations Data Model | Power BI, DAX, Data Modeling

2026

- Re-architected 23 fragmented, inconsistent source tables into a production-grade dimensional model (6 fact tables, 6 dimension tables), resolving duplicate keys and redundant hierarchies to cut schema complexity by 70%+.
- Implemented row-level security (RLS) to enforce controlled, role based data access across business units, and authored DAX measures to power real-time sales, inventory, and campaign dashboards.

Real-Time Weather Streaming Analytics | Azure Databricks, Azure Functions, Event Hub, Microsoft Fabric, Power BI

2026

- Engineered a real-time streaming data pipeline using an Azure Function App scheduled at 2-minute intervals to ingest live weather API data, publishing events to Azure Event Hub for downstream processing.
- Orchestrated continuous data ingestion and querying using Microsoft Fabric's Real-Time Intelligence stack (Eventstream + Eventhouse/KQL database), enabling low-latency analytics on streaming data.
- Built a live Power BI dashboard for real-time monitoring and configured Data Activator to automate threshold based alerting via Outlook, eliminating manual monitoring overhead.

ACHIEVEMENTS

- Hackathon:** Secured 1st place out of 14 competing teams in a college hackathon by architecting a functional full-stack chatbot within a strict 24-hour deadline to streamline campus query resolution.
- Academic:** Ranked 1st out of 48 students in the SSLC examinations, securing the top academic position in the batch with an aggregate score of 89.66%.
- LeetCode:** 80+ SQL & Pandas problems solved.
- Award:** Received the Discipline Award in Information Technology Department for outstanding discipline and consistency throughout the academic year.

CERTIFICATIONS

- IBM:** IBM Data Analytics Professional Certificate
- Deloitte:** Data Analytics Job Simulation Certificate
- Microsoft:** Microsoft Certified: Fabric Analytics Engineer Associate (Scheduled – Oct 2026)
